

SUSTAINABLE PRODUCT MANUFACTURING

improving health and well-being through sustainable manufacturing

ONLINE CEU EVENT | APRIL 20, 2021

Sustainability in the workplace has become a priority for many businesses - making it more important than ever to understand the social, environmental, and economic characteristics of sustainable product manufacturing. Please join us for a virtual, sustainability-focused CEU to explore why conducting material assessments matters to product development, and ultimately occupant health and safety, environmental well-being, and the bottom line in business.

COURSE DESCRIPTION

There are good reasons for a manufacturer to conduct a Life Cycle Assessment (LCA), Environmental Product Declarations (EPDs) and Health Product Declarations (HPDs). Diminishing the embodied energy and ecological impacts of products can reduce manufacturing costs and improve the bottom line financially and environmentally. Explore the sustainability case for these transparency measures using the example of one product manufacturer; in a facilitated exchange, discuss their strengths and limitations. Answer the questions: Are these measures sufficiently robust to withstand scrutiny and be widely applied at this time? What benefits would your professional practice realize by adopting these material assessment measures?

WHEN

Tuesday, April 20, 2021
12:00 PM CST

PRESENTED BY

Jessie Stenftenagel
Sustainability Specialist, DIRTT

CEU VALUES

IDCEC	
Continuing Education Units (CEU)	0.1
Course #	104296
Designation	LU
AIA	
Learning Units (LU)	1.0
Course #	DIRTTE8
HSW	YES
